PROFESSIONAL SUMMARY

Performance-driven Python Backend Developer with expertise in building high-speed RESTful APIs, scalable microservices, and optimized databases using FastAPI, Django REST Framework, and PostgreSQL. Skilled in async processing (Redis & Celery), JWT/RBAC security, and AI/LLM automations.

TECHNICAL SKILLS

- **Core & Frameworks:** Python, FastAPI, Django, Django REST Framework (DRF), Asyncio, SQLAlchemy.
- **Databases & Caching:** PostgreSQL, Redis, SQLite, SQL Query Optimization, Alembic.
- **Architecture & Security:** RESTful APIs, Microservices, Async Pipelines, JWT Auth, RBAC, Rate Limiting.
- **DevOps & Tools:** Docker, Docker Compose, Git, GitHub Actions (CI/CD), Nginx, Pytest, Celery, Prometheus, Grafana.
- **AI & Automations:** OpenAI / LLM API Integration, Smart Workflow Automation.

FEATURED PROJECTS

1. SupportFlow — Multi-Tenant Support & SLA Platform

- **Tech Stack:** Django DRF, PostgreSQL, Docker, Nginx, Terraform, Pytest.
- Developed a multi-tenant customer support and SLA management API with strict Role-Based Access Control (RBAC) supporting Owner, Admin, Agent, and Customer tiers.
- Configured production infrastructure using Docker Compose, Nginx reverse proxy, and Terraform configuration.
- Ensured robust code reliability with 206 automated test passes.
- **GitHub:** <https://github.com/Almas-Web/supportflow.git>

2. SaaS Billing & Subscription REST API

- **Tech Stack:** Django DRF, PostgreSQL, SSLCommerz Payment Gateway, Docker, GitHub Actions (CI/CD), Render.
- Developed a production-ready SaaS billing and subscription backend with automated IPN webhooks and invoice generation.
- Integrated SSLCommerz payment gateway for secure transaction handling and automated recurring subscription lifecycle management.
- Automated testing and cloud deployment pipelines using Docker and GitHub Actions CI/CD on Render.

- **Live API:** <https://saas-billing-api-9p36.onrender.com/api/docs/> | **GitHub:** <https://github.com/Almas-Web/saas-billing-api.git>

3. TeamFlow API - Task & Team Collaboration System

- **Tech Stack:** FastAPI, SQLAlchemy, PostgreSQL, Redis, Celery, Docker, Prometheus, Grafana.
- Engineered a high-performance backend API for workspace & task management.
- Implemented background email queues via Redis & Celery and automated system monitoring using Prometheus & Grafana.
- **GitHub:** <https://github.com/Almas-Web/teamflow-api>

4. CommerceHub E-Commerce REST Engine

- **Tech Stack:** Django DRF, PostgreSQL, Redis, Celery, Pytest, Docker, Nginx.
- Built a production-ready e-commerce API supporting multi-role permissions (Customer, Seller, Admin).
- Achieved 97% test coverage (187 test cases with Pytest) and optimized DB queries with Redis caching.
- **Live Demo:** <https://lnkd.in/gZmH8TX7> | **GitHub:** <https://lnkd.in/g8X84MDa>

5. Multi-Vendor E-Commerce REST API

- **Tech Stack:** FastAPI, PostgreSQL, SQLAlchemy, Alembic, Docker.
- Designed a multi-tenant marketplace REST API focused on low-latency data responses.
- Built dynamic Role-Based Access Control (RBAC) isolating Vendor store operations from Admin/Customer systems.
- **GitHub:** <https://github.com/Almas-Web/multi-vendor-ecommerce-api>

6. Blog Management REST API

- **Tech Stack:** Django DRF, PostgreSQL, Docker, GitHub Actions (CI/CD), Render.
- Developed a cloud-deployed REST API featuring rate-limiting, password recovery, and search filtering.
- Automated tests and cloud deployments using Docker and GitHub Actions CI/CD pipeline.
- **Live Demo:** <https://lnkd.in/gpaWHD4A> | **GitHub:** <https://lnkd.in/gTczvFNQ>

KEY VALUE PROPOSITION

- **API Speed:** Reduced response latency with asynchronous handlers and Redis caching.
- **Data Security:** Bulletproof authentication flow with JWT tokens and encrypted database credentials.
- **Cost Efficiency:** Clean DB schema design and optimized SQL queries to reduce server overhead.
